

Deau Passe[®] Filter

Organic Air

Light duty recirculating charcoal fiber Scrubber

The Deau Passe light duty charcoal fiber scrubber is a high capacity, single layer charcoal fiber filter. It filters a given volume of air many times through repetition. Using charcoal carbon fiber with a massive surface area of activated charcoal, then pleated and formed into two opposing cones, the Light Duty filter allows for maximum air flow with the least resistance.

Installation:

The light duty charcoal scrubber attaches to a fan or blower by sliding the rubber collar over the inlet or outlet side. Secure the filter by using the clamp provided, tighten clamp with screw driver. Remove and wash the filter when needed with a water hose. The light duty scrubber should be replaced every year under moderate use.

The *Freshmaker* Heavy Duty & the in-line versions:

If an exhaust filter or in-line filter is needed for your application, Deau Passe Filters recommends it's uniquely constructed, multi-layered heavy duty charcoal fiber filter, "The Fresh Maker", or the innovative in-line version. Never before has filtering so much air, been done by such a small, light yet effective filter. Fading quickly are the days of large charcoal carbon pellet technology. Old style filters are large, heavy and inefficient as compared to our innovative high-flow, dual cone technology.
