

# The Oneness Soil Feeding Schedule (10-week Bloom)

USEFUL CONVERSIONS	
1 teaspoon	= 5 ml
1 Tablespoon	= 15 ml
1 ounce	= 30 ml
1 quart	= 946 ml
1 gallon	= 3.785 L
1 gallon	= 128 ounces
*1 teaspoon (powder)	= 2 1/3 grams (approx.)

* GEOLIFE	1st Application	2nd Application			3rd Application									Flush

Always use un-chlorinated water, maintain pH levels between 5.5 - 7.2 and check reservoir after adding all nutrients. Oxygenate water before and during application. To prevent nutrient settling, always use a pump at the bottom of the reservoir to continually agitate and mix the nutrient water during application. Research and Development conducted using water obtained by reverse osmosis containing near 0 PPM. Measurements taken with a Hanna H19813-0 meter (different meters can give slightly different readings).

The Oneness Program works excellent in all growing applications: ebb & flow (re-circulating), drain to waste, aeroponics, deep water culture and fogponic systems, using any growing media or garden setup. If using a ebb & flow system, drain your reservoir every 5-7 days then clean your equipment, pumps, and remove any filmly buildup on the reservoir itself.

\* If Using GeoLife®, in a re-circulating system DO NOT change reservoir out for first 2 weeks of Grow. Let the GeoLife® solution mature in your system for a full 2 weeks.
